

Impruval®

Attitude, Performance, Recovery

- Helps promote normal hormonal balance
- Helps support normal brain and nerve function
- Enhances exercise tolerance
- Supports normal recovery time after strenuous activity

What is Impruval®?

Impruval may be beneficial as a pre and post event recovery supplement. *Impruval* may also offer benefits for hormonal mares by supporting normal hormone balance.

During periods of intense activity, particularly during multi-day events, a horse's nutritional requirements are significantly increased.

This includes a greater demand for vitamins, minerals, electrolytes and energy.

If these demands are not met, horses may suffer stress which may lead to ulcers, build up of lactic acid in muscles and poor recovery time. *Impruval* contains a mixture of herbal and mineral supplements which may support digestion and mineral intake, normal stress levels and normal recovery times.

Impruval may also support the horse's normal endocrine system.

Feeding Guidelines

Add to feed twice daily

Maintenance: For 10 days

Morning feed: 1 x 25ml

Evening feed: 1 x 25ml

Performance: For 3 days pre-event, during, and 2 days post event

Morning feed: 1 x 50ml

Evening feed: 1 x 50ml

Based on a 500kg horse

Ingredients

A proprietary blend [Liquid sea minerals, Moorlife, Seaweed derived calcium, Fulvic acid, Gamma oryzanol, Omega 3 oil] 100ml

Sizes Available

1L / 2.5L / 20L

About the Ingredients

Liquid sea minerals are a natural product containing over 40 sea minerals and trace minerals; including potassium, magnesium, calcium and sodium.

Moorlife is a natural compound, rich in bio-minerals, vitamins and amino acids; made from herbal compost, containing herbs, plants and flowers.

Seaweed derived calcium provides a bioavailable source of calcium and magnesium and may be used as a digestive aid buffering supplement for horses prior to stressful conditions.

Fulvic acid is an electrolyte used to create cellular balance. It may support normal digestion, health and vigor.

Salmate is a powder containing Omega 3, EPA and DHA which may support general antioxidant benefits, heart rate and oxygen flow to muscles.

Gamma oryzanol is a plant sterol which may support muscle mass, strength, energy and normal stress levels in horses.

Testimonial

"My 7yr old mare CP Ellira is quite sensitive and highly strung at the best of times, but in May this year she became even harder to deal with. She became extremely head shy, hard to catch and difficult to ride. As a Stance Equitec sponsored rider I rang them asking for recommendations on a product that may help, Lisa recommended **Impruval**, formally known as Nitro G as she thought it may be hormone related. **Within one week I began to notice positive changes and within three weeks she is back to her normal self** and even jumped double clear in her first 1.25m at the 2017 Bundaberg Show. The changes were amazing and she has returned to her normal self and jumping her socks off!"
