

OsmoPlex®

Salt and Electrolyte Replacer

- Provides electrolytes
- Supports hydration
- Supports muscle function and fluid balance

What is OsmoPlex®?

OsmoPlex is a specific blend of minerals designed to support osmotic balance and normal cellular pH. There is over 50% sodium chloride (salt) in every 80g daily amount of **OsmoPlex**. Chloride is the electrolyte which is lost in the greatest amount in heavily sweating horses and sodium is an important electrolyte, as it is essential for nearly every bodily process. Increasing the sodium concentration in water in the horse's body may engage the horse's thirst drive. This is vital in maintaining hydration, as it encourages the horse to drink.

OsmoPlex includes seaweed derived calcium especially rich in the minerals magnesium and calcium. **OsmoPlex** also includes the mineral potassium. These minerals support normal cellular growth as well as muscle and nerve function.

Inclusion of glucose may assist with the absorption of sodium and increase palatability.

Feeding Guidelines

Add to feed twice daily

Morning feed: 1 x 40g scoop

Evening feed: 1 x 40g scoop

In hot weather or after intensive exercise increase evening amount to 2 scoops (80g)

Based on a 500kg horse

Horses supplemented with OsmoPlex do not require additional salt. Always provide access to clean water

Electrolyte and Hydration Facts

- Just 2% dehydration can cause loss of performance
- Low to medium level exercise can cause horses to lose 5-10L of sweat per hour
- Inadequate sodium intake may promote or aggravate anhydrosis (inability to sweat normally)
- It can take 72-96 hours for a badly dehydrated horse to fully recover

Ingredients

A proprietary blend [Sodium chloride, Potassium chloride, Sodium bicarbonate, Magnesium sulphate, Magnesium oxide, Seaweed derived calcium, Dextrose, Yeast (*Saccharomyces cerevisiae*)] 40g

Sizes Available

500g / 5kg / 10kg / 20kg

Testimonials

"In July this year I started using Equitec Performance Products '**OsmoPlex**' on CP Ellibell. She has always sweated alot and was fussy with drinking on long trips and at competitions. On her first big trip away after starting **OsmoPlex** to a competition in October, she was a different horse! **People were commenting on how much she had matured in appearance, she was drinking and she was jumping her heart out.** To say I was impressed is an understatement and to top it off, Ellibell won the Bronze Final on the final day of the Tamworth World Cup event."

Tim Bowman, 2016

"I had been having a few respiratory issues with my top horse and wanted to make sure that he was back feeling his best as soon as possible. I had tried a few other products with no luck, until I tried Stance Equitec **OsmoPlex**. **Within just a week of using OsmoPlex he was nearly back to normal, his sweating had increased and his puffing had decreased.** His first weekend back competing, on **OsmoPlex** he placed top 4 in every class including jumping only one of two clear first rounds in the Grand Prix. I will certainly be continuing to use Equitec **OsmoPlex** and hope to try a few of the other products due to the great success I have had with **OsmoPlex**. To top it off the team at Equitec could not have been any more helpful! Thankyou Equitec!"

Kirstie Ansell, 2014
