

ProFlex®

Joint, ligament and tendon

- Supports cartilage, ligament, tendon function
- Supports hoof growth
- Supports joint mobility

What is ProFlex®?

ProFlex supports the skeletal, endocrine, nervous and circulatory systems.

ProFlex provides the horse with precursors for the natural synthesis of ingredients, such as collagen, to support normal joint and ligament function.

ProFlex® Facts

ProFlex is not a quick fix and should be fed over a long period of time.

Sometimes when we continue to provide the horse with an ingredient they would usually synthesize themselves, the trigger to produce that ingredient is switched off. The unique ingredients in ProFlex avoids this by nutritionally supporting the systems involved in the long term health of the horse.

Suggested Product Combinations

VitaStance - A balanced bio-available vitamin, mineral and amino acid mix for horses and ponies. May boost internal health and support the immune system.

OsmoPlex - Salt and electrolyte replacement

Feeding Guidelines

Add to feed twice daily

Morning feed: 1 x 35g scoop

Evening feed: 1 x 35g scoop

Based on a 500kg horse

A 20kg ProFlex will last a 500kg horse 285 days.

Safe for horses or ponies with metabolic issues.
Suitable for competition.

Ingredients

Gotu Kola, Vitamin B1, B3, and B5, Vitamin C, Seaweed derived calcium, Omega 3 Oil, Hesperidin, Methylsulphonylmethane (MSM), Seaweed meal, Spirulina, Gelatin, Glucosamine sulphate, Lysine, Zinc proteinate, Dextrose, Silica, Magnesium sulphate

Sizes Available

2kg / 4kg / 10kg / 20kg

FOR THE NATURAL ADVANTAGE™

About the Ingredients

Glucosamine is found in tendons, ligaments, synovial fluid, muscle membranes and several structures in the eye, blood vessels and heart valves.

Methylsulphonylmethane (MSM) is a source of sulphur that is converted into an important component of connective tissue. It may have a role in supporting normal osteo and oxidative function.

Lysine is an amino acid that when fed along side **vitamin C**, is extremely important in the structure of cartilage tissue and protein synthesis.

Gelatin and Spirulina: Collagen is a fibrous protein that connects to muscles, bones and skin - making them stronger. Gelatin is pure collagen that has been processed into a powder. Spirulina is 65% amino acids and is one of the world's most nutrient rich ingredients. Spirulina

and gelatin form a powerful relationship to support the horse's natural process of producing collagen for healthy muscles, bones and skin.

Vitamin C is an essential element for the formulation of the hydroxyl groups needed in cartilage synthesis. **Vitamin C** deficiency may result in reduced production of collagen - the protein based structure in tendons and ligaments.

Zinc is required by over 70 different enzymes to function. In this instance **zinc** is used in the hydrolysis and cross linking needed for collagen formation.

The **citrus bioflavonoid hesperidin** in **ProFlex** may support antioxidant function.

Gotu kola is a herb that may support the production of chondroitin sulphate and hyaluronic acid.

Testimonial

"Twelve months ago our 3yo ASH began getting 'stuck' in his hind legs. Each morning he would drag a hind leg and at times it would seem to give way and he would stumble. He was very reluctant to step backwards under saddle and on the ground. Very concerned, we had him assessed by our vet who said it was common in young horses for the stifle to 'lock'. My daughter did lots of reading and decided to put him on Pro Flex.

The improvement was noticeable within a week of commencing ProFlex! His beautiful free flowing movement returned

and he has now just competed in his first Elementary Dressage test which included a fluid rein back! He also competes in ASH Challenges and he is managing 'Roll backs' with greater ease.

We have to make sure we don't run out of ProFlex because if he is off it for a couple of days we do notice his leg gets stuck again. Thankyou ProFlex for helping our talented and beautiful moving young man to keep moving." Jackie Collins
