What is Biotin Extra Strength?

- Biotin is thought to improve hoof and coat health in horses by promoting development of keratin.
- May improve hoof growth rate and quality of the hoof horn.
- Studies have shown improvement in hoof strength and increased growth rates.
- Long term supplementation is required to generate positive change, this change can be seen within approximately 8 to 15 months.
- Due to the water soluble nature of biotin any excess is excreted from the body, so long-term use is safe.

Biotin Extra Strength for Founder Recovery

"Our pony Eve foundered as a 2 year old, and the x-rays showed 10 and 12 degrees rotation of the pedal bones. We were distraught, and at a loss as we had never had a horse with laminitis before. We were recommended to add **Stance Equitec Biotin** to her feed as it improves hoof integrity and growth.

We couldn't believe the difference it made to the growth of her soles, which in turn helped to reverse the rotation quite significantly! Our vets were in shock at the amount of change we'd been able to achieve.

Eve is now a healthy, sound saddle horse and wins consistently at top level. We will always add Biotin to her's and all of our horse's feeds, and can't thank Stance Equitec for offering such a wonderful product!"
